BENJAMIN ANDREW SLATES

RED TEAM / OFFENSIVE SECURITY RESEARCH

hello@benslates.xyz | github.com/ben-slates | benslates.xyz | Rynex Security

PROFILE

Cybersecurity researcher and red teamer specializing in adversarial emulation, low-level exploit development, and Active Directory attack chains. Proven experience constructing modular C2 architectures, reverse engineering binary payloads, and engineering high-performance tooling in Rust and Python. Active at Rynex Security.

EXPERIENCE

Rynex Security -- *Cybersecurity Specialist & Red Teamer*

- Executing offensive penetration testing, red team adversary emulation, and vulnerability assessments.
- Architecting and validating attack chains against enterprise network infrastructure and Active Directory domains.
- Researching zero-day exploit telemetry and developing automated verification scripts for client engagements.

SELECTED ENGINEERING & RESEARCH PROJECTS

BEN_C2 (Command & Control Framework) -- *Rust, Python, Async Network Architecture*

- Built high-performance asynchronous C2 server with Rust implant core and Python API orchestration.
- Implemented AES-256 encrypted communications, jitter-based beaconing, and in-memory process injection for evasion.

mdread (CLI Markdown Reader) -- *Python, Terminal UI*

- Engineered fast, clutter-free CLI Markdown viewer with instant 1-click command copying to system clipboard.

discord-voice-notes (Audio DSP & Client Mod) -- *CSS, JavaScript, Opus DSP*

- Designed native 64kbps Opus voice engine, Base64 waveform generation, and 83 custom glass theme integrations.

CVE-2026-31431-Exploit & CVE-2024-37054 PoCs -- *Python, Memory Analysis*

- Dissected complex memory corruption primitives, engineered weaponized proof-of-concept exploitation testbeds.

gmsa-aes-key-extractor -- *Python, Kerberos, Active Directory*

- Automated Group Managed Service Account (gMSA) cryptographic AES key retrieval and offline forged ticket decryption.

esp32_NAT_router -- *C, Embedded Firmware, Network Routing*

- Configured field-deployable ESP32 hardware router with NAT packet redirection and covert hotspot management.

TECHNICAL ARSENAL

Offensive & Red Team
Active Directory (Kerberoasting, AS-REP, Shadow Credentials), PrivEsc (Linux/Windows), C2 Development, Pivoting & Tunneling

Languages & Systems
Rust, Go, Python 3, TypeScript, JavaScript, C, x86/x64 Assembly, Modern Bash

Tools & Platforms
Kali Linux, Burp Suite Pro, Metasploit, BloodHound, Evil-WinRM, Nmap, Wireshark, Gobuster, Hashcat

Practical Security & CTF
Hack The Box (Hacker Rank, 10+ machines pwned), Certified Penetration Testing Specialist (CPTS) path, Junior SOC path

INTERESTS & DISCIPLINES

Adversary Emulation • Low-Level Exploit Development • Vulnerability Research • Security Automation • Malware Analysis • Hardware & RF Security
